Millions of Devices with
Invigo's **Automatic Device
Management Solution****

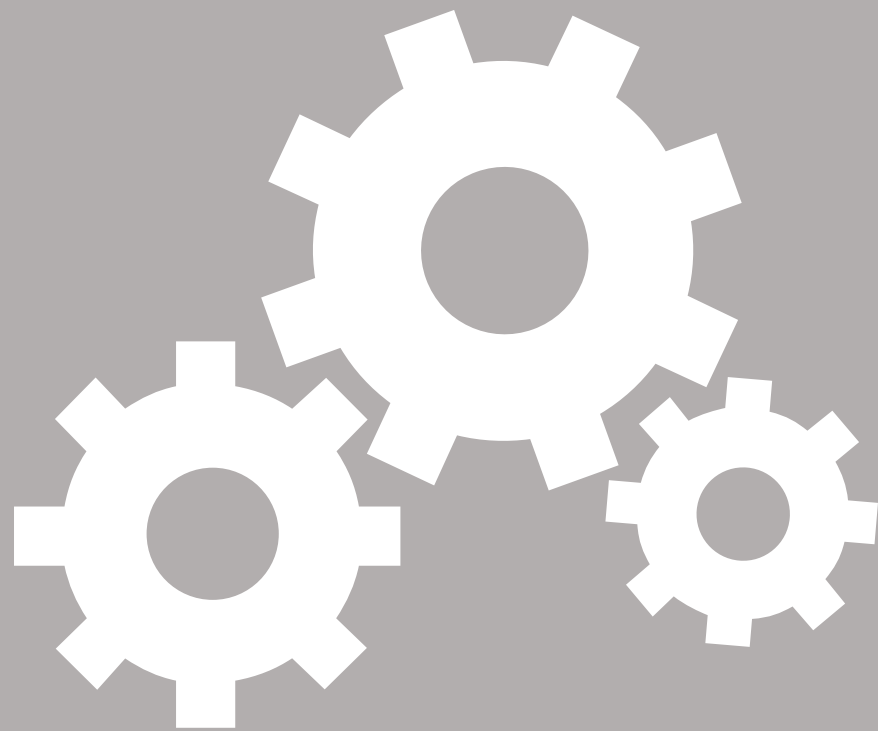

SWIPE

Automatic Device Configuration

Remotely configure mobile devices using standard OTA protocols for services like Internet, WAP, MMS, and more.

Device Analytics

Gain real-time insights into subscriber device behavior with our flexible and customizable report builder, enhancing your marketing campaigns.

Device Database and Update Service

Access one of the industry's richest device repositories, updated weekly over VPN, ensuring you always have the latest device information.

Triggers and Customer Engagement Module

Reduce churn and build loyalty by making device behavior data accessible to various teams, enabling precise targeting of subscribers with relevant offers.

Automatic Device Detection

Detect network events such as new subscribers, handset changes, or IMSI swaps in real time.
